Supplementary crop information

Property No.	Crop type	Area insured (ha)	Est. yeild (t/ha)	Value (\$/t)	Your Share %	Sharepartner	Sharepartner % to be insured ? Y/N

Policy Option Definitions

Final Revision Policy (standard)

This policy allows you to adjust your Insured Yield and Insured Value up and down (subject to the standard Insurer waiting period) up until the final revision date at which point Your final Insurance Schedule and Premium Invoice will be issued.

After Harvest Policy

This policy provides further flexibility after the final revision date letting you pay premium on harvested tonnes or claims paid based on potential yield subject to a floor and cap (varies by insurer) and a premium loading does apply.

Agreed Value per tonne

Nominate an Insured Value upfront and this can be adjusted until the final revision date at which point it can no longer be reduced.

Fixed Value per tonne

Fix the Insured Value on your crop at the start of the season (e.g. you have forward sold wheat at \$300/t). No reductions are allowed to the Insured Value but a discount is provided in recognition of this.

Market Value per tonne

Let your Insured Value float with either the ASX futures or Profarmer best price. The Insured Value will be determined on the average of the last five trading days in November (first five days of November for QLD and Northern NSW) plus or minus any nominated adjustment (e.g. freight, premium for your crop).
